Crystal Lake Enhancement Plans

Phase 1 on the Crystal Lake rehabilitation is nearing completion. Over 500 truckloads of sediment and road particles which enter the lake through stormwater were removed from the sediment basin at the north end of the lake, and are being evaluated for offsite disposal options. Park district staff continue to gather lake samples and data twice per month, and treatments have begun to address high nutrients and water quality concerns. Additionally, engineering is underway for a 10-foot wide path along the south side of the park with construction beginning in 2019. In the next phase, portions of the lake edge will be cleared of invasive vegetation and the lake shore will be graded and replanted with native grasses and wildflowers to facilitate lake access, improve habitat and further help with water quality.
